Atul Mishra – Resume Interview Questions & Answers

Data Analytics / Fresher Interview Preparation

1. Tell me about yourself.

Answer: Good morning sir/mam. My name is Atul Mishra. I am currently pursuing my B.Tech in Computer Science and Engineering from Goyal Institute of Engineering, Lucknow. I also completed my Diploma in Computer Science and Engineering from Khalsa College of Engineering and Technical Campus, Jalandhar. I have skills in Python, SQL, Excel, Power BI, and n8n automation. I have worked on projects such as a Power BI Sales Performance Dashboard, rainfall trend analysis using Python and Excel, and AI workflow automation using n8n. I am interested in Data Analytics, AI, and automation, and I am looking for an opportunity where I can apply my technical skills and learn from real-world projects.

2. Why do you want to work in Data Analytics?

Answer: I enjoy working with data and finding useful insights from it. Data Analytics allows me to use Python, SQL, Excel, and Power BI to clean, analyze, and visualize data. I want to build my career in this field and improve my analytical and technical skills through real-world projects.

3. What are your technical skills?

Answer: My main technical skills are Python, SQL, Excel, Power BI, and n8n. In Python, I have worked with Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn. I also have knowledge of data analysis, statistical analysis, time-series analysis, data visualization, and workflow automation.

4. Explain your Power BI project.

Answer: I worked on a Power BI Sales Performance Dashboard. The purpose of the dashboard was to analyze sales performance and present important information through interactive visualizations. I used Power BI to create visuals and dashboards so that sales data could be understood more easily.

5. What is Power BI?

Answer: Power BI is a business intelligence and data visualization tool developed by Microsoft. It is used to connect data from different sources, clean and transform the data, create relationships, and build interactive dashboards and reports.

6. What is DAX?

Answer: DAX stands for Data Analysis Expressions. It is a formula language used in Power BI to create calculated columns, measures, and perform calculations on data.

7. What is SQL?

Answer: SQL stands for Structured Query Language. It is used to communicate with relational databases. We can use SQL to retrieve, insert, update, and delete data and perform analysis using queries.

8. What is the difference between WHERE and HAVING?

Answer: WHERE filters individual rows before grouping, while HAVING filters groups after GROUP BY.

9. What is a JOIN in SQL?

Answer: A JOIN is used to combine data from two or more tables using a related column. Common joins are INNER JOIN, LEFT JOIN, RIGHT JOIN, and FULL JOIN.

10. What is Pandas?

Answer: Pandas is a Python library used for data manipulation and analysis. It provides useful data structures such as DataFrame and Series and helps with tasks like filtering, cleaning, grouping, and analyzing data.

11. What is NumPy?

Answer: NumPy is a Python library mainly used for numerical and mathematical operations. It provides arrays and functions that make numerical calculations efficient.

12. Explain your rainfall trend analysis project.

Answer: My project was Climate Change Impacts on Hydrologic Extremes – Rainfall Trend Analysis. I collected long-term rainfall data from the India Meteorological Department and analyzed it using Python and Excel. I converted daily rainfall data into monthly, quarterly, half-yearly, seasonal, and annual time scales. Then I applied the Mann–Kendall test, Z-test, and p-value analysis to identify rainfall trends.

13. What is the Mann–Kendall Test?

Answer: The Mann–Kendall test is a statistical test used to identify whether there is a significant increasing or decreasing trend in a time-series dataset. I used it in my rainfall trend analysis project.

14. What is a p-value?

Answer: A p-value helps us determine whether a result is statistically significant. Generally, a small p-value provides stronger evidence against the null hypothesis.

15. Explain your n8n project.

Answer: I built an AI-based automation workflow using n8n. I integrated n8n with Google Sheets, AI content tools, web search automation, and external triggers. The workflow collected trending topics, generated structured content ideas, stored information in Google Sheets, and supported semi-automated publishing with a manual approval process.

16. What is n8n?

Answer: n8n is a workflow automation platform. It allows us to connect different applications and APIs and automate repetitive tasks using workflows and triggers.

17. What is API integration?

Answer: API integration means connecting different software applications through APIs so that they can exchange data and perform actions automatically.

18. Explain your Grocery Store Management System.

Answer: I developed a console-based Grocery Store Management System using C. It included inventory management, billing, cart handling, and invoice generation. I used structures, arrays, file handling, and modular programming. File handling was used to store data and update stock records.

19. Why should we hire you?

Answer: As a fresher, I am eager to learn and improve. I have practical knowledge of Python, SQL, Excel, Power BI, and automation, and I have applied these skills in different projects. I am hardworking, adaptable, and interested in solving real-world problems using data and technology.

20. What is your weakness?

Answer: Sometimes I spend extra time making sure my work is accurate. I am improving this by setting priorities and managing my time more effectively.

21. Where do you see yourself in 5 years?

Answer: In five years, I want to become a skilled Data Analyst or Data/AI professional with strong technical and analytical skills. I want to work on real-world projects, take more responsibility, and contribute to the growth of the organization.
